

Low Pressure Readings You Can Take To The Bank

The innovative Ashcroft[®] DXLdp low differential pressure transmitter is a favorite for critical air flow, room pressure and air handler applications. Equipped with the exclusive Ashcroft[®] SpoolCal[®] option, this transmitter can be validated, zeroed and calibrated while on line, without ever having to disconnect the pressure tubing. Diagnostic indicator lights and easily accessible test jacks enhance the ease of testing while DIN rail mounting makes installation a “snap”.

With the advanced Ashcroft[®] MEMS Si-Glas[™] sensor, the DXLdp yields unprecedented stability and reliability, consistently providing accurate readings over the long life of the transmitter.

Simple installation, low maintenance, easy validation and high reliability all add up to significantly reduced costs of operation.
