

Keeping Canada Safe...

With Ashcroft[®] Dual Seal Flameproof Pressure Switches

Ashcroft[®] “dual seal” flameproof pressure switches are enhanced with a second diaphragm barrier to ensure pressure media containment in the unlikely event of a breach in the primary sensing diaphragm. Developed primarily for the Canadian oil and gas industry, this safety design meets the requirements of ANSI/ISA-12.27.01-2003 and is rated by CSA under file LR 55541. The dual seal feature is available as the D2 option on Ashcroft[®] Types B700, D700 and P-Series pressure switches.

For more information about the dual seal feature, view:
