

Much More Than Just Rugged Good Looks

Ashcroft is proud to introduce the GC35 pressure sensor; our latest innovation in pressure monitoring and control. Equipped with a 4-20mA analog output, 4 digit LED display and programmable switch contacts, the new multi-function GC35 pressure sensor can perform all of the functions of a transducer, digital indicator and a pressure switch, simultaneously or independently.

GC35, with lower connection

GC35 with back connection

The unique tri-color GloBand™ provides a 360° visual indication of the switch's trip status.

For the more serious requirements of applications "out on the line", a rugged nickel plated cast aluminum housing and a high over-pressure rating ensure durability despite difficult operating conditions. A choice of back or bottom pressure connections and ranges from vacuum through 7500 psi make the GC35 an easy fit.

Other standard features include min/max recall and adjustable analog scaling along with RoHS and CE compliance.

The GC35 is a great choice for automated process and manufacturing applications. This advanced pressure sensor delivers remote signaling, local reading and pressure control, all in one hearty, compact design.
