

Trying To Keep It Clean?

Check out our wide variety of Ashcroft[®] sanitary pressure instruments...

There is no room for compromise when controlling contaminants in sanitary applications, especially when you're monitoring process pressures. Since the process media comes in direct contact with the instrument, it must be specifically engineered to eliminate traps and facilitate thorough cleaning.

Ashcroft[®] sanitary instruments are configured with industry-standard electropolished Tri-Clamp[®] sanitary connections for ease of cleaning and removal. Constructed of stainless steel and firmly sealed, these rugged devices will stand up to both chemical and high temperature washdowns.

If your needs include a gauge, switch, digital indicator or transducer, Ashcroft has a sanitary instrument to suit your application.

Ashcroft[®] is a registered trademark of Ashcroft Inc.
Tri-Clamp[®] is a registered trademark of Alfa Laval Inc.

Ask about these model types:

- [Type 1032 Sanitary Pressure Gauge](#)
- [Type 1032 Fractional Sanitary Pressure Gauge](#)
- [Type 1036 In-line Sanitary Gauge](#)
- [Type 1037 Sanitary Instrument Fitting \(used with 1036 gauge\)](#)
- [Types 2032 through 2236 Digital Pressure Gauges](#)
- [Type KS Pressure Transducer/Transmitter](#)
- [Type A2 Pressure Transducer/Transmitter \(newly available in sanitary configuration\)](#)
- [Type A Pressure Switch \(newly available in sanitary configuration\)](#)
- [Type G Pressure Switch](#)

When it comes to application-specific instrumentation, remember Ashcroft... the big name in pressure measurement.
